19 Father's Day	20 Juneteenth No School	21	22	23 Last Day with Students	24	25
26	27	28	29	30	1	2

1. This is a SUGGESTED Pacing calendar... it is not meant to be followed day-by-day but to guide you through the year.
2. We tried to add in spacer days each month for you to use reteach, review, catch up and work on Exemplars. These days are circled in **black**. They are spacers – you can move them to address the needs of your students. We thought it was important to work in time and be realistic about the needs of your students.
3. Investigation lessons are not assigned on days that are typically Primary Celebration Days. This idea is with the hopes that you can plan for an enriching math experience that is relevant to your instruction and the celebration.
4. Unit Diagnostics should be administered in enough time to adjust your instruction. Give yourself at least a week before you start the unit to adjust to what is necessary for your class. These items were listed in the beginning of the unit but can be placed where you think is appropriate.
5. The Unit Diagnostic is a short, quick checkpoint. If you chose to connect it to a lesson, you will gain an additional day to reteach, review or enrich.
6. You will see we have worked in many days at the end of the year. We understand how June can quickly fill up with activities and fitting in structured instructional time can be difficult. Keep in mind these days are also available for you to float throughout the year as you see needed.
