

# FREE GRAPHING CALCULATORS

The following graphing calculator apps have been approved by the District. There are other graphing calculator applications available and you may use them, but the district is not advocating the promotion of downloading free trials that end with some form of payment. Also, students who cannot complete assignments that require advanced Graphing Calculator functions will not be penalized.

Students with **Android phones** can utilize the “**Wabbitemu**” app. It is an exact fully functioning replica of any TI calc from the 83 to the 84 plus color.

Students with an **iPhone** can utilize the “**Calculate84**” app. It is not an exact replica, but it is free and gets the job done.
